

Couper et coller

Un coup de plus !

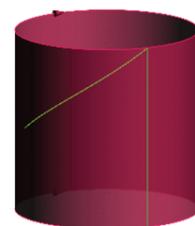

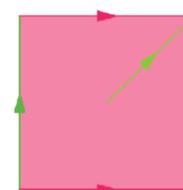

Si on commence avec le patron

On deplace le sommet vers l'interieur

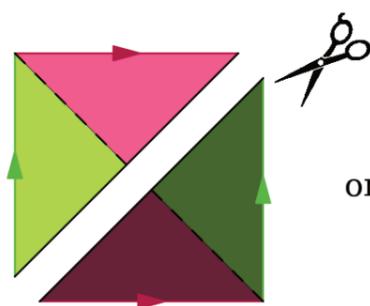

On colle

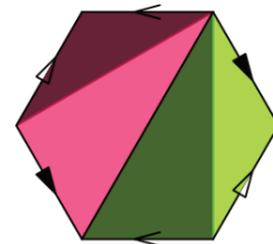

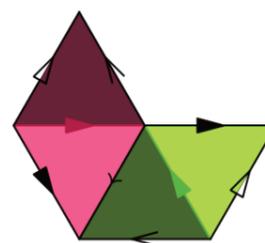

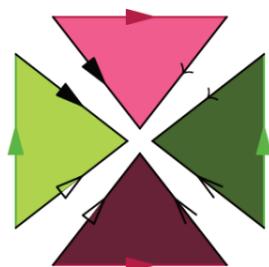

Mais on aurait pu couper plus méchamment ...

et notre colleur être un peu maladroit

on a alors

C'est réparé !

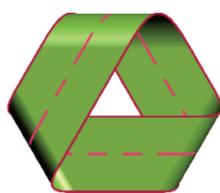

qui est donc encore le patron d'un tore

Même le ruban de Moebius peut être déguisé

La méthode de couper et coller peut être utile pour comparer les surfaces

Si on colle

sur

ou

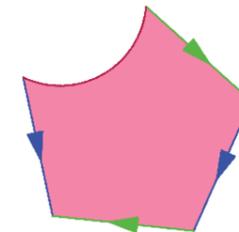

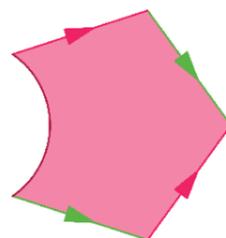

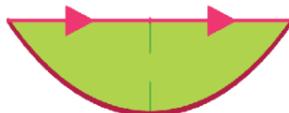

bord à bord

qui a pour patron

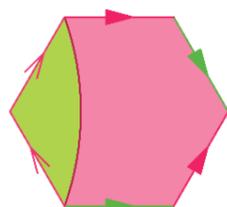

qui a pour patron

qui a pour patron

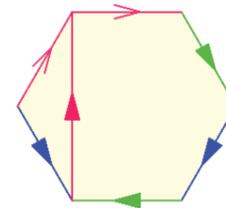

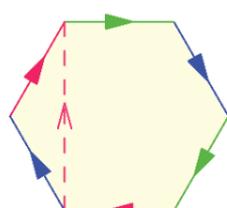

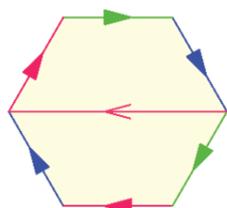

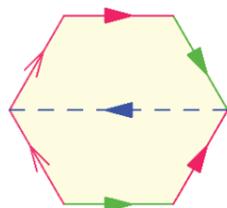

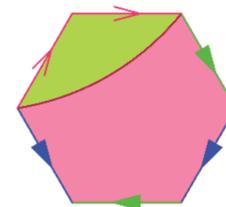

obtient-on la même surface ?

La première surface a donc comme patron

et la deuxième

ces deux surfaces sont les mêmes !
